

Altitude Angel is an award-winning provider of UTM (Unified Traffic Management) solutions provider, enabling those planning to operate, or develop UTM/U-Space platforms, to quickly integrate robust data & services quickly and easily.

GuardianUTM

- An intuitive airspace management platform for airports, ports, landowners, and infrastructure managers
- Enables timely and simple permissioning for drone operations

Altitude Angel's first party solutions power some of the world's leading ANSPs, aviation authorities and Enterprises, including LVNL (Netherlands) and Avinor (Norway), empowering them with new capabilities to safely manage and integrate drone traffic into national operations.

- Next-generation airspace management operating system
- Designed to fully integrate drones safely into everyday ATM activities and systems
- Remaining fully future-proof to evolve with the changes

Our Drone Operator Solutions

Drone Assist

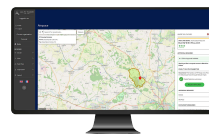

Europe's most popular mobile flight planning app, available on iOS & Android.

Drone Safety Map

Web-based airspace information map, spanning 152 countries.

Operator Portal

Desktop flight planning and authorisation tool for operators and fleet managers.

Skyway

Altitude Angel is building the world's largest & longest network of drone superhighways and in doing so will unlock the huge potential offered by unmanned aerial vehicles and be a catalyst to enable growth in the urban air mobility industry.

How does it work?

Today drones cannot be routinely flown without a human pilot or BVLOS. Altitude Angel's technology **unlocks their power** to transform lives and revolutionise business.

ARROW towers – an innovative array of ground-based, networked sensors 'scanning' the sky - are connected to Altitude Angel's global UTM platform, GuardianUTM. The real-time airspace data collected is processed to create a **single-source-point-of-truth** - an ultra-high-resolution, real-time, moving map of the low-altitude sky.

From this, Altitude Angel provides a **next-generation**, digital, automated, air traffic control platform, allowing traditional and new airspace users to share the same skies, safely and securely.
